

The Charter Township of West Bloomfield has revamped its Environmental Department website. The interactive site contains pertinent information regarding environmental policy, health, and conservation procedures and programs with access to permit applications and instructions, recycling and native plantings information, and safety issue tree concerns. The website can be visited at www.wbtwp.com (Go the Environmental Department webpage)

Included in the website material are online permit applications, educational materials, links to other governmental resources, and a calendar of environmental events in the area. Issues presently highlighted include a West Nile Virus mosquito control program, rain garden education materials, and procedures for the inspection and removal of safety issue trees.

To continue its commitment to progressive environmental programs, West Bloomfield Township regularly updates the website to provide more information and resources to its residents. The Environmental Department is committed to protecting, restoring, and enhancing the natural resources of West Bloomfield Township for current and future generations using approaches and solutions based on science and best management practices, collaboration and respect for all the stakeholders involved. Home to 26 lakes and over 100 ponds and water bodies, West Bloomfield Township encourages residents to interact and protect their surrounding natural resources.

Coming soon, residents will see an updated, interactive Engineering Department website with safety path construction locations and reporting procedures, information on grading permits, and storm water management information. To check updates, go to www.wbtwp.com.
