Why did the Township switch to a single hauler system?

The reasons for moving to a single hauler system are to address the existing deficiencies within the waste and recycling system as follows:

1. A high volume of heavy truck traffic caused by multiple service providers working within the same neighborhoods which results in excessive wear impacts to roads within the Township.
2. Multiple haulers results in impacts to neighborhood quality, as trash is set out for collection several days a week.
3. Low recycling and diversion rates.
4. Encourage higher recycling participation.
5. Limited access to an affinity based recycling program, which rewards recyclers with gift cards and coupons to area restaurants and merchants.
6. Inequitable cost structure that resulted in only a limited number of residents and haulers paying for the Household Hazardous Waste Collection Program, system management and other service costs.
7. Lack of reliable and accurate waste generation and recovery data.

The Development Services Department will be implementing a public outreach campaign shortly to communicate the change and the reasons for the change to residents.
